PROFILE

I'm an engineer with a foundation in algorithms and additional studies in computer graphics and GPU programming. Video games is a favorite hobby of mine, a journey which has mainly consisted of CS 1.6, DOTA 2 and competitive TF2. At the moment I enjoy playing Rocket League, Apex Legends and coop games with my friends. One of my biggest strengths is my curious personality, which motivates me to dig deep into problems in order to fully understand and learn from them. Everything from the architectural level to the small details interests me. I also have a passion for C++ and love to learn more and dig deeper into the language. I greatly enjoy mentoring and teaching others and have successfully led both thesis students and teams of interns. I also enjoy tinkering with different graphics projects at home, some of which can be seen on my homepage!

Work Experience

2023 – Intermediate Core Engineer | Sharkmob | Malmö

Developer in the Core Engine team. Our main task is to modify the Unreal Engine codebase to better fit Sharkmobs needs. This consists of developing new systems for our game Exoborne, but also profiling, optimizing and solving bugs in the engine. I work both server- and client-side, and also work with solving issues in the rendering pipeline. Example of systems I am responsible for are the fire system and the indoor system.

2021 – 2023 Developer | AFRY AB | Malmö

Developer in the Embedded Systems team in Malmö. Mostly develop in C/C++ for embedded Linux environments. Examples of tasks include creating an application for handling a docker installation on a camera, and being a leading figure in modernizing the C++ used in our codebase.

2014 – 2021 Developer | Sectra AB | Linköping

Developer in an imaging and visualization team for medical imaging. I mainly worked in C# and C++, developing visualization tools for radiologists and universities. We were also responsible for profiling and optimizing the performance and stability of the imaging workflow. Major projects include developing the NM Fusion tool, which produces renderings of two separate volumes and fuses the images according to user input. My work included both frontend and backend, database included. An example of when I worked on all parts was when I designed our solution for creating and viewing lectures for education purposes in our product. I was also lead on the implementation of this feature. One of my

biggest accomplishments was profiling, optimizing and multithreading our image preloader. I also worked on improving our 3D rendering engine. Mentorship has also been one of my tasks, such as leading teams of summer interns as well as thesis students and new employees.

2013 Developer | Saab Dynamics AB | Linköping

A summer job where I multithreaded and implemented a ray tracer for underwater acoustic simulation in CUDA.

Education

2008 – 2015 Master in Computer Science | Linköping University

My degree is MSc in Computer Science with a specialization in Programming and Algorithms. I took additional courses in Computer Graphics as well as GPU-programming and graduated with an average grade of 4.5. I also got into competitive programming and was selected to travel with a team to NWERC in Bremen to compete for Linköping University.

My master thesis was done at Syntronic AB and had the title “Using OpenCL to Implement Median Filtering and RSA Algorithms: Two GPGPU Application Case Studies”. My work included researching, implementing and optimizing Median Filtering and RSA algorithms on the GPU.

2004 – 2007 IT-Gymnasiet | Skövde

Language skills

Swedish	Native language
English	Fluent

Programming languages

Good knowledge in

C#, C++, C

Basic knowledge in

Java, Python, SQL, JavaScript, GLSL, Powershell, Bash

Miscellaneous

Experience in CUDA, OpenCL and OpenGL

Experience in Microsoft Visual Studio in a business environment

Experience in Perforce, SVN, TFS, Mercurial and Git

Experience in Docker, Yocto, CMake

Driver's license

Grades and references are available upon request.
